## What's New In Adobe Photoshop CC?

1. Field of the Invention The present invention relates to a zoom lens, and in particular, to a zoom lens having a large zooming ratio, and suitably used as a zoom lens to be provided in a camera for still pictures, particularly of a high degree of resolution. 2. Description of the Related Art Recently, for a zoom lens, it has been demanded to make high a magnification and to reduce a size. It has been known that, to expand an angle of view, a refracting power of a first lens unit is relatively weak and a refracting power of a second lens unit having a large numerical aperture is relatively strong. However, it has been not sufficient to increase a refracting power of each lens unit in order to expand an angle of view. As a zoom lens, as one of means for expanding an angle of view, there is known a zoom lens in which an image is formed in an intermediate image position within a first lens unit, and focusing is conducted from a rear surface of the first lens unit (for example, refer to Japanese Patent Publication No. SHO 57-44290). That is, it is known that, as a zoom lens, a first lens unit and a second lens unit move, so that an angle of view of the zoom lens can be expanded, and focusing is conducted from the rear surface of the first lens unit. Further, there is known a zoom lens, in which a central beam passes through a spherical surface, the beam is refracted at a light source side surface and a diaphragm side surface of the first lens unit, thus making an image formation, and the beam is focused onto an image surface side (for example, refer to Japanese Patent Publication No. HEI 8-234167). That is, it is known that, in order to expand an angle of view, and at the same time, achieve a reduction in size, a first lens unit and a second lens unit move, so that an angle of view of the zoom lens can be expanded, and focusing is conducted from the rear surface of the first lens unit. Also, as a zoom lens to be provided in a video camera, a zoom lens to be attached at a position nearer to the object than the front focal plane, and a miniaturized and high magnifying zoom lens are known (for example, refer to Japanese Patent Laid-Open Publication Nos. HEI 8-195792, 2001-107290 and
